Breakdown of Critical, High and Normal Risk Events

Security Events by Location

Geographic Distribution of Security Activities

Weekday Activity Heatmap

Security Event Intensity by Day & Time Slot

	12AM-4AM	4AM-8AM	8AM-12PM	12PM-4PM	4PM-8PM	8PM-12AM
Monday	7546	7718	7726	7749	7568	7664
Tuesday	8659	8534	8465	8528	8427	8470
Wednesday	8670	8585	8580	8224	8600	8451
Thursday	11682	11892	11957	11773	11985	12191
Friday	7704	7667	7629	7527	7680	7622
Saturday	7718	7496	7827	7666	7556	7626
Sunday	9345	9293	9434	9294	9290	9288

Key Findings

- Jan 2026 spike was 61x above monthly average
- Thursday 8PM–12AM is peak activity window
- USA accounts for 90% of all security events
- Risk categories evenly split across all events

125K

Critical Risk Events

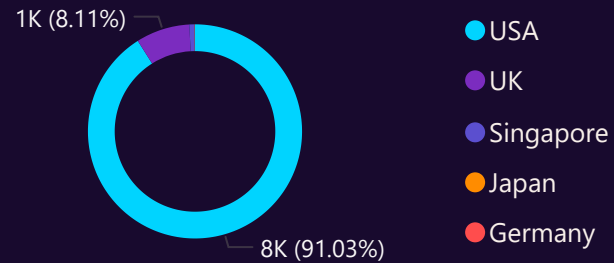

34.67%

Failed Event Rate

User Distribution by Location

Unique monitored users per geographic region

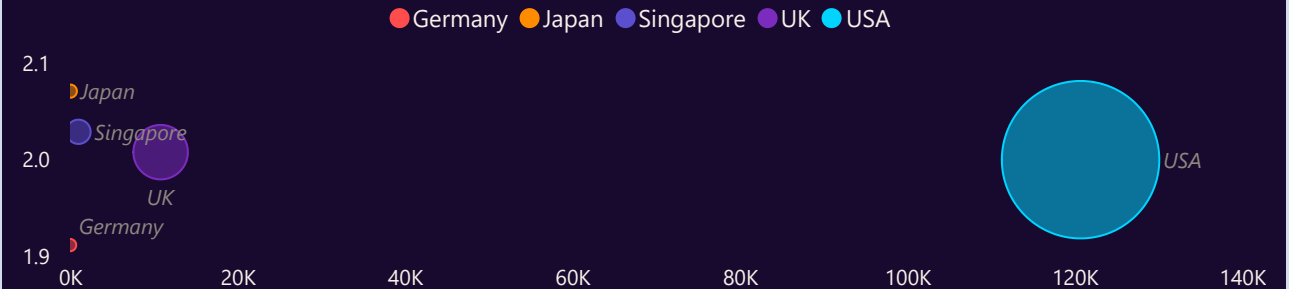

Insight

USA → Most failed events + Large total events | UK → Medium risk, medium events | Germany/Japan → Very low activity

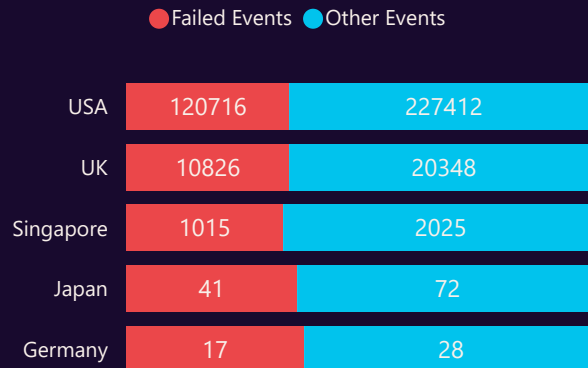

Location Risk Score vs Failed Events

Relationship between average risk score and authentication failures

Location vs Failed Events

Comparison of failed and successful login activity by location

Location Risk Summary

Risk category breakdown across monitored locations

Location	Critical Risk Events	High Risk Events	Normal Events	Event Count
USA	113654	120716	113758	348128
UK	10291	10826	10057	31174
Singapore	1056	1015	969	3040
Japan	40	41	32	113
Germany	12	17	16	45

Key Findings

- USA generates 91% of monitored user activity
- High-risk events account for 35% of total activity
- UK is the second highest risk region
- Germany and Japan show minimal threat exposure

Avg Failed Attempts by Protocol

Authentication failure trend across network protocols

Top Port Distribution

Network activity by destination port numbers

Insight

80 → HTTP
443 → HTTPS
22 → SSH
21 → FTP
3306 → MySQL
8080 → Proxy

Key Findings

- UDP shows highest auth failures (130.31 avg)
- SSH is the most secure protocol (126.00 avg)
- Port 8080 dominates network traffic
- 33% connections blocked or timed out
- Top threat IP: 31.59.130.14 → 20K failures
- 69K unique IPs monitored across all network activity

Threat Severity Distribution

Breakdown of detected threats by severity level

Operating System Distribution

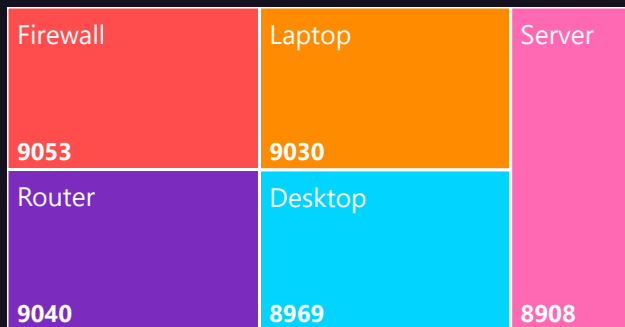

Most frequently used operating systems across monitored devices

Device Type Distribution

Endpoint inventory categorized by device type

● Firewall ● Router ● Laptop ● Desktop ● Server

Device Type vs Operating System

Cross-analysis of device categories and operating system usage

Device Type	Android	iOS	macOS	Ubuntu	Windows 10	Windows 11
Desktop	16.31%	16.76%	17.26%	16.58%	16.03%	17.06%
Firewall	17.33%	15.40%	16.34%	17.39%	16.81%	16.73%
Laptop	16.46%	16.46%	16.82%	15.83%	17.20%	17.24%
Router	17.09%	16.73%	16.45%	16.38%	17.22%	16.13%
Server	16.31%	16.59%	16.76%	16.76%	15.93%	17.65%

Key Findings

- Privilege Escalation is the top threat (15,101)
- All severity levels equally distributed (~25%)
- Windows 11 is the most used OS (7,632 devices)
- Server devices show highest Windows 11 usage (17.65%)
